Gentlemen:

Please quote me on the following trees for delivery as follows:

Fall 1959 _____	Winter-Spring 1960 _____	Regular budding _____	Registered _____	Psorosis - Free _____
Number _____	Variety _____	Rootstock _____	Name _____	Address _____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____

WHAT TO LOOK FOR IN BUYING A CITRUS TREE

IS IT TRUE TO NAME AND TO TYPE?

A **Registered** citrus tree has to be true to name and type or it cannot be registered by the State Plant Board. The parent tree must be 10 years of age to be registered and must have a proven record of bearing true-to-name and type fruit. Fruit from the parent tree is observed for two years before registration is issued.

IS IT DISEASE — FREE?

A **Registered** tree is certified free of viruses in one of three categories: (1) Psorosis only, (2) Psorosis and xyloporosis only, and (3) Psorosis, xyloporosis, and exocortis. The **registered** tree must also be free of tristeza, gummosis, blight, decline, leprosis, the least possible bud mutation, and other recognizable bud-transmissible diseases. Not only must the registered parent tree be tested and found free of these diseases, but the scion trees of the parent are similarly tested, inspected, and registered. The tests are **continuing** and any suspicious symptom of disease may be cause for dropping the registration of a parent or scion tree.

IS IT A PROVEN PRODUCER?

A **Registered** tree is selected not only for its freedom from disease but for its record of production both quantity-wise and quality-wise.

IS IT VIGOROUS?

A **Registered** parent tree is selected primarily because of its vigor and fruitfulness. Annual production records are being maintained on the parents and the scion trees and it is expected that production from registered trees will be close to the maximum.

IS IT AN ECONOMICAL BUY?

A **Registered** tree is not a cheap buy. Too much work in selection, testing, record keeping, and care go into the production of a **registered** tree to have them sell at cut-rates. But the price of a **registered** tree at present time is only about a third greater than most regular budded trees — and this differential may drop in time. But it's what you get for the price differential that counts. A **registered** tree is a **bargain**.

IS IT AVAILABLE?

Yes—**Registered** trees are available right now in limited quantities. We shall have 50% of our production for 1960 in **registered** stock, and practically 100% by 1961. You can assure yourself of obtaining **registered** trees for Fall 1959 or Spring 1960 by placing your order now.

WHAT IS THE REPUTATION OF THE NURSERY SELLING THE TREE?

We can answer this question only for ourselves. Ward's Nursery was organized in 1924 by William F. Ward, and has had a continuous record of growth since that date. From a production of a few hundred trees in 1924, we have now grown to an annual production of one-quarter million trees—not the biggest, but among the leaders in the state. Ward's Nursery was the first entrant into the Citrus Budwood Registration Program and has helped to shape the program and encourage it. We have satisfied customers in every one of the citrus-producing counties in Florida. We are proud of our reputation and strive continually to uphold it. In May 1958 we became Ward's Nursery, Inc. but we remain a close-knit family organization and pay personal attention to our nursery propagation work. Won't you call or write us for further information or quotations.
